

“Introduction to Open Source Intelligence – Hands On”

Thursday 19th April 2012
9.30am- 4.30pm

The prevalence of technology and how it can be used to gather intelligence or evidence is important for today's investigators.

Open Source Intelligence research plays an increasing role in developing information and items of interest. This one day introductory course will provide the opportunity to professionally enhance your knowledge in this area, and gain practical experience.

GCHQ stated that, “The web is increasingly a focus of our work. By 2012, we predict the main medium carrying intelligence on our targets will be via the Internet. Our targets’ use of computers has become smarter, more varied and agile. The Internet and surrounding issues have become a key focus that we need to keep abreast...and using it in turn to produce intelligence on high value targets.”

E Crime Solutions has developed this introductory course for Open Source Intelligence research to train individuals who wish to utilise this capability within their organisation.

The scenario based course will be presented by staff who have practical experience in Open Source research, to develop intelligence packages and assist in criminal investigations.

This comprehensive one day course held in St Helens, Merseyside, will cover the following subjects:

- An introduction to the Internet
- How to legally capture evidence
- Emails and Newsgroups – What information can you gather?
- Search Engines and Open source Sites
- Social Networks
- Practical Exercises.

The cost of the course is £125 which includes lunch and refreshments.
Each delegate will have access to their own computer.
